We had never anticipated budgeting for emergency fund until it happened. We never knew what incidences will happen along the way. We hope this fund will also be considered to the next mission schedules if possible.

OVERALL TOTAL:PHP 25, 334.00

1 Vehicle was sponsored by Yahweh's Grace Ministry (4x4 wheels SUV vehicle)

1 Vehicle was sponsored by Full Gospel Faith Temple (4x4 wheels SUV vehicle)

COORDINATION TO MISSION

April 6, 2017

Representatives of Full Gospel Faith temple and Yahweh's Grace Ministry Phils. Travelled to Ramot, Santol, La Union to conduct the final survey and mission coordinator to the Village leader in-charge and to fully finalize and prepare for the mission.

Mission representatives and coordinators met with the barangay chief leader Mr. Aniceto Esteban (in dark yellow shirt) at his residence.

Coordinators also visited the residence of the school head Mrs. Imelda Tamang (in yellow shirt holding the coordination letter) To coordinate for the mission venue at Ramot Primary School.

Coordinators roam to nearby villages to survey the entire place and to inform of the upcoming mission event.

Raw products of the village as the main livelihood is farming (soft broom grass, rice, sweet potato). Others move out from the village and go to work at the mining companies in Benguet and Baguio City areas.

Twin tomb: the oldest tomb type in the village

Courtesy call with the Municipal mayor Mr. Magno Waylan informing The Dental Outreach mission to take place in his area of jurisdiction.

MISSION PROPER

April 14-15, 2017

5:00 Am assembly time at Baguio City Central Fire station

group prayer before dispatch

Alpha, Bravo, Charlie team heading up to the mountains from the Municipal proper to reach the mission site.

8:32 AM team arrival at mission site venue Ramot Primary School.

Welcoming of the Volunteers

Breakfast of Volunteers

Preparation of Volunteers and community for the mission proper while patients are not yet arriving

Safety Forces

Arrival of patients from the community

START OF MISSION PROPER

Admission area: registration, bp taking, vital signs and forms

Patients queuing for their designated areas of care

Spiritual counseling: all patients were being prayed for before proceeding to areas of care. Religious tracks, magazines and bibles were distributed to the patients.

Dental: dental check-up, oral prophylaxis, fluoride application to children, dental extraction

General assessment: Most adult patients were being assessed and diagnosed for gingival and periodontal problems.

Children to adults do not have much dental caries observed. Gingival and periodontal problems may be associated with plaque induced due to poor oral hygiene and oral care negligence and the lack of vitamin C supplement. As we had assessed the community, almost to only a few citrus fruits were found for them to consume to aid in the prevention of gingival and periodontal problems. Although the remaining carious teeth of patients was induced by food and bacteria which were can still be restored by dental restorations. There were only few visits of dental programs to their community which at their younger ages, their teeth were not being cared by dental professionals. No dental education was also being rendered to the community causing them to have a lack to none idea of how to properly care for their oral structures. This is a place where it is a must for return for further Oral_dental care program and Education.

Wound Management and Care

Plantar laceration due to sharp metal object

Wound cleaning and dressing done. Take home wound care kit was given to the mother for home care. Medication prescribed.

ulcerated scabies

Wound cleansing and ointment application done. Take home cleansing kit and ointment was given to mother for home care. Instructions for prevention and care was advised to the mother of the patient.

Haircut and therapeutic massage

PHARMACY : Distribution of post operation medications and vitamins, distribution of free toothbrushes and toothpastes

Lunch, Snack time while at work and Dinner: Church and community volunteers served as food committee for the volunteers.

Lunch Time

Snack while at work

Dinner Time

Fun Times After work

Sunset

Note: Our Ultrasonic scaler malfunctioned due that the inner way of the water line inside the motor was clogged and we cannot use it. Dental personnel did manual scaling. Ultrasonic needs repair.

DAY 2 MISSION APRIL 15, 2017

Wake up morning from our sleeping quarters, feeling amazed with the scenic views of the mountain summits

Group breakfast: fuel up!!!!

Snack time while at work and Lunch Time

Relax modes of volunteer after the mission

Pack up and load up.

Group pictorial: Post Mission

Group prayer before dispatch

Group tour (the North's longest agricultural tramline

Travel Back to Baguio City

MISSION ACCOMPLISHED!

Mission Overview

Ramot, Santol, La Union is located along peak mountains of La Union province which is being adjacent and nearby to boundary with the Province of Benguet. It is the highest barangay of province of La Union which its road access was high inclined with sharp curves which make it difficult for some vehicles to travel. Only strong machined vehicles can reach the place.

Main livelihood is agricultural farming (rice, less to vegetables, sweet potatoes, soft broom grasses). One of the mostly experienced problems of the residents during summer time was the water supply which is very limited to water their farms. Only during rainy seasons they could do the rice farming. Also the transportation of their products due to the far access to agricultural vehicles to deliver their goods to the downtown city of San Fernando and nearby municipalities. Also access to good transportation is very limited, most transportation that they use was the so called "habal-habal" a motorcycle which people rides in triple tandem(equivalent to one driver and two passengers). This makes it very difficult for the residents especially during rainy seasons.

The community has a one and centralized primary school (Ramot Primary school)and it is where we conducted the mission. It has only four rooms to cater day care pupils up to grade six students. This makes it very difficult to the students that in every room, it accommodates a mixed grade students. The school also has no library and no reference e books to be used by the students for their studies. No new chairs, old typical chairs were still being used. No school clinic and emergency medical kits. Almost very less visual aids for the teachers to use for their teaching methods. This is one of the recommendation we could make as a project for this school(school supplies and improvement and additional rooms to accommodate the school children so they could learn in a comfortable environment it should be.)

The community has also a health center with a volunteer health worker. One of the main problem is the lacking of Medical- Dental supplies that needs by the people of the community (This is also another concern). The improvement of their water system that it has a very limited production of enough water during summer season.

Health concerns, most of the residents were at hypertensive situations. This may be related to the kind of livelihood they have, the types of food which were usually carbohydrate related foods, and they are less to vegetables and fruits. Dental concerns was most also were suffering from gingival and periodontal problems leading to their early edentulous. Food matters, programs and educations is being needed by the community for them to learn on how to boost up their health status, increase their knowledge on oral and dental hygiene system, prevention of the possible arise of medical and dental related problems.

We therefore recommend this place for another future missions and long-term programs for improvement and development.
